

ROHIT SHARMA

MERN STACK DEVELOPER

srmarohit@gmail.com | [LinkedIn](#) | +91-8103801661 | [GitHub](#)

MERN Stack Developer with 5+ years of experience designing and building scalable web applications using MongoDB, Express.js, React.js, and Node.js/NestJS. Delivered real-time communication platforms, subscription-based apps, and collaboration tools using GraphQL, Kafka microservices, and Redis-based caching/messaging.

TECHNICAL SKILLS

Programming: JavaScript (ES6+), TypeScript, Python

Technologies & Frameworks: React.js (Hooks, Context API, Redux/Redux Toolkit, Module Federation), Next.js (SSR, SSG, ISR, App Router), Express.js, NestJS (Microservices, Monorepo), FastAPI, GenAI, RAG, Agentic AI, Agents, MCP, MizuSDK, AWS Chime SDK, Jitsi, PostHog

Databases: PostgreSQL (Prisma, TypeORM), MongoDB (Mongoose), VectorDB (Pinecone, Qdrant)

Styling: Sass/SCSS, Tailwind CSS, Styled Components, CSS Modules, Bootstrap, MUI, Ant Design

Testing Tools: Jest, React Testing Library, Cypress, e2e Testing

API & Data Fetching: REST, GraphQL, Apollo Client, Axios, React Query/TanStack Query, WebSockets

Auth & Security: JWT, OAuth 2.0, Clerk, Passport.js, RBAC, Consistent Hashing, Helmet, CORS, Rate Limiting (Throttler)

Messaging / Event-Driven: Kafka, RabbitMQ, Redis Pub/Sub, BullMQ/Bull, AWS SQS/SNS

Microservices: NestJS Microservices (TCP, Redis, Kafka, RabbitMQ transporters), gRPC, Event-Driven Architecture

Caching & Delivery: Redis, Cache-Manager, CDN (CloudFront, CloudFlare), Load Balancing (Nginx)

Version-Control/CI/CD: Git, GitHub, GitLab, Bitbucket, GitHub Actions, Jenkins, Docker (Docker Compose), Vercel, Netlify

Cloud Services: AWS (EC2, S3, Lambda, RDS, API Gateway, ECS), Azure, GCP

Monitoring & Logging: Winston, Prometheus, Grafana, Loki, Datadog

Performance: Lighthouse, Web Vitals, Code Splitting, Lazy Loading, Memoization, DB Indexing (B-tree), Query/Aggregation Optimization, Sharding/Partitioning

Other Tools: npm/yarn/pnpm, ESLint, Prettier, Husky, Postman, Chrome DevTools

AI Tools: Spec-Driven Development, Vibe Coding, Code Review & Security Analysis, PR Automation, Claude, Copilot, ChatGPT

PROFESSIONAL EXPERIENCE

Simform Solutions Pvt. Ltd. | MERN Stack Developer

June 2023 – October 2026

Curated European Trip Booking Platform

- Public-facing website: Built with Next.js, Redis, and WebSocket, it lets customers browse, filter, and book self-guided trips, group tours, and custom interrailing routes, with real-time availability updates.
- Internal admin panel: Built with React.js, NestJS, PostgreSQL, and BullMQ, it lets admin staff manage packages, bookings, and deposits, and handle background operations like confirmation emails and travel-pack generation, together forming an end-to-end system for discovering, booking, and fulfilling curated European rail travel packages.

UCaaS – Unified Communications Platform

- Built a unified communications platform for messaging, video/audio calling, and faxing across web, mobile, and desktop with SSO (Microsoft 365/Google) and MFA.

- Integrated Jitsi API for video calling, built RESTful APIs in Node.js, and used Redis Pub/Sub for real-time notifications alongside PostgreSQL/AWS RDS for data storage.
- Set up monitoring and observability using Prometheus, Grafana, and Loki to track system health and troubleshoot issues in production.

Athlete Fan Club Platform

- Built a web app supporting Members, Athletes, and Admins with role-based features, letting fans subscribe to athlete clubs for exclusive content.
- Implemented authentication via Clerk, integrated Prisma ORM with MongoDB, and used BullMQ for background job processing (subscription/payment workflows) to improve reliability.

Partner & Opportunity Management Platform

- Built a collaboration platform for organizations to register, invite partners, and manage shared opportunities with role-based access and AI-powered chat.
- Built role-based auth, opportunity invite/accept-reject workflows, and an analytics dashboard; used Redis Pub/Sub for real-time collaboration updates and BullMQ for async notification queues.

Xeenius Technologies Pvt. Ltd. | Full Stack Developer

July 2022 – June 2023

Personalized Job Dashboard

- Built a web app that streamlines job search management by automatically extracting job-related details from the user's email inbox and presenting them in a personalized dashboard.
- Implemented secure email integration with 2FA and IMAP-based scraping to pull and structure job-related emails, removing the need for manual tracking.
- Built the frontend with React.js and backend with Express.js, using Firebase for authentication and hosting.

LevelApp Innovation Pvt. Ltd. | Trainer

July 2020 – June 2022

PROOF OF CONCEPTS (POC)

POC: NestJS + GraphQL — <https://github.com/srmarohit/nestjs-graphql-postgress>

- Built a schema-first GraphQL API in NestJS for a multi-warehouse inventory system, using DataLoader to resolve N+1 issues and Guards for field-level authorization.
- Implemented real-time stock updates via GraphQL Subscriptions with validated, type-safe queries and mutations.

POC: Kafka with Microservices — <https://github.com/srmarohit/NestJs-Redis-docker-kafka-postgress>

- Designed an event-driven order processing system with 3 NestJS microservices communicating via Kafka topics, using consumer groups and dead-letter topics for reliability.
- Ensured ordered, idempotent message processing to handle Kafka's at-least-once delivery guarantee.

POC: Module Federation with Vite — <https://github.com/srmarohit/mfe-vite>

- Built a micro-frontend dashboard using Module Federation (Vite) with a host shell and independently deployable React remotes.
- Shared React/React-DOM as singletons and enabled dynamic remote loading without host redeployment.
